

# PillsPlan

No more stress helps cure progress.

Every year the number of people who must take medicine for longer time period increases. Today, every fourth person has some medicine or vitamins prescribed, which affects his daily regime. It's not an easy task to remember all the information about the number of pills, way or time of consumption. This can negatively affect effectiveness of the medication and, in the worse cases, even put one's life in danger.

Thanks to our research we have found out that more than 70% of asked people would welcome the opportunity of having an app which would remind them when to take their drugs, since only ¼ of the asked had never forgotten about them.

Pillsplan is not only for ill people or people who forget a lot, but also for doctors, who want to store information about their patients in one place. Even though this app helps to remind people to take their medicine, this app isn't only an alarm. It contains many important and helpful functions such as notifications, number of pills remaining in one package, history of drugs taken by the user, contraindications and even remind the patient his next doctor's appointment. The customer will be informed about expiration of his medication, as the chemicals in the drugs may hurt the person if used after the expiry date. Our app has the ability to inform where the closest drugstore is and can even provide the import for an ill patient who might not be able to get up and buy the medicine by himself.

Apart from other similar apps, we provide a very simple way of adding information into the application, the user doesn't have to set up anything, all that he must do is to scan his prescription paper from his doctor. Similar apps which have millions of downloads provide only notifications with the medications' names. Most of them are in English and that can cause problems for the patient, as it might be hard even in his mother tongue to understand the information written about his drug.

In the future our plan is to cooperate with drugstores, which we would recommend to our customers and that would make a great advertisement for the cooperating drugstores. It may even become possible to buy the medicine with our application. By working with the drugstores, people will be able to get their medication without waiting, as the drugs will be prepared for them in the drugstore right after the app notifies its user that he ran out of the medicine.

The last thing a sick patient wants to do, is to walk to the drug store, just to buy his medication. Therefore, we would like to provide a delivery service for our users and help them recover quicker. Thus, this app will be able to save lives and make staying healthy easier.

Our team consists of six people, which have many innovative ideas. Together we would like to make peoples' lives easier as we can relate to their problems. So who are we?

**Martin Hrabovec** is the CEO in our team. He is taking care of our team, he makes sure to divide the work well and he keeps an overview of what's going on. He's got years of experience and he isn't afraid of taking risks when it comes to accomplishing our goals. He also has an experience with programming and development, which makes him very helpful in many ways.

**Filip Mihál'** has a logical thinking. He is our specialist for backend and apart from server and android does a lot of other activities. He is the one that does a lot of job around the computers and makes the applications „alive“.

**Pavλίna Pavlíková** is working with PR management and social networks. She is one of the two girls working on this project, which makes this company get ideas from both genders and it profits from it.

**Jakub Ondrúšek** is a frontend and a backend developer in one. Thanks to his experience in programming that he has gained by working on previous projects and successfully finished his AP course, Jakub is able to develop any feature of the app. He is also responsible for dividing the work that needs to be done in coding.

**Hana Vanovčanová** is in charge of marketing and sales. For a business oriented person it is important to know how to communicate with clients, gain feedback, attract new customers and analyze our market results. Thanks to her customer oriented abilities such as empathy she is adding a great value to our team.

**Daniel Skala** is our developer. Thanks to his patience and dedication, he is a very skilled programmer and together with Jakub he forms a great team when it comes to coding. He's very important to our team, as without him, we wouldn't have been able to create this application.
